Level 5 Requirements

1. A Gmail account

2. Github account

All Assignments must be emailed to this email address:**thabani.projectx@gmail.com**, before their respected date. **If you get an auto-reply, your assignment will not be marked.**

Assignment 1:

> 💡 You can work in teams of up to 4

A customer has a set of applications that he wishes to run. You must create a short proposal as to which hosting company, and the package must be used.

The system will consist of a, but not limited to:

1. Database

2. Authentication service

3. A Dashboard application

4. A content management system

5. Email services(For communication purposes)

6. API (This product is already deployed)

7. File Storage

These are the requirements:

- The customer prefers a cloud server. Provide a cloud service where the applications will be running

- All Applications will be hosted in the same server.

- Provide a product for the user, and justify the requirements

Assignment 2:

> 💡 This is an individual project

Create a web page that has your profile. The application will be deployed to Firebase

- The application will be styled using Bootstrap

- basic information

- A picture of yourself

- A SWOT analysis

- Where do you see yourself in 5 years

- What you took away from the levels

- A contact me section that will store the information in an endpoint that will be provided.

- A dashboard screen that will list all of the necessary contact information

- You can use any additional information and assets such as YouTube videos, blogs, and links

- Must have a link to your Github profile

The Application will be deployed to Firebase
